62-18284

Trans. of Klin[icheskaya] Meditsina (USSR) 1960, v. 23,
[no. 6] p. 71-74.

DESCRIPTION: Therapy. *Asthma. *Air. *Ions.
Particles, blood chemistry.

Light air ions with a negative sign, utilized without the
use of side physio-influences or chemical substances,
possess a certain physiological action. When a therapy-
peutic dose of light air ions with a negative sign (about
100-150 billion in one session) is utilized, the composi-
tion of the blood improves and the resistance of the
organism to various irritants is stabilized. The course of treat-
ment for bronchial asthma consists of 10-20 sessions.
